

Patient Number: _____

Date: _____

Instructions:

- 1.) Use the diplopometer to measure a distance of 16 inches between the patient's eyes and the diplopometer's test position
- 2.) Starting at the notch, move a fixation target (e.g., a Q-tip) slowly towards the number 45
- 3.) When the patient reports double vision, mark an 'X' on the chart

Note: The chart should be completed from the patient's perspective (i.e., the left portion of this paper represents the patient's left visual field)
